### Question: 14

A company has a four-node Microsoft Windows cluster that runs Microsoft SQL Server databases. Each server boots from its own Boot from SAN volume on the Storage Center. All servers need access to the database volumes. In addition, a server cluster objects has been created with the four servers assigned to it in Dell Storage Manager.

How should the volumes be mapped to these servers using the server cluster?

- A. Map the boot volume of each server individually  
Map all database volumes to the cluster's Leader node
- B. Map the boot volume of each server individually  
Map all database volumes to the server cluster
- C. Map all boot volumes to the server cluster  
Map all database volumes to each server individually
- D. Map all boot volumes to the server cluster  
Map all database volumes to the server cluster

**Answer: C**

### Question: 15

You need to install a dual controller Storage Center with an SC200 enclosure and an SC280 enclosure.

Which exhibit represents the correct back-end cabling?

A)

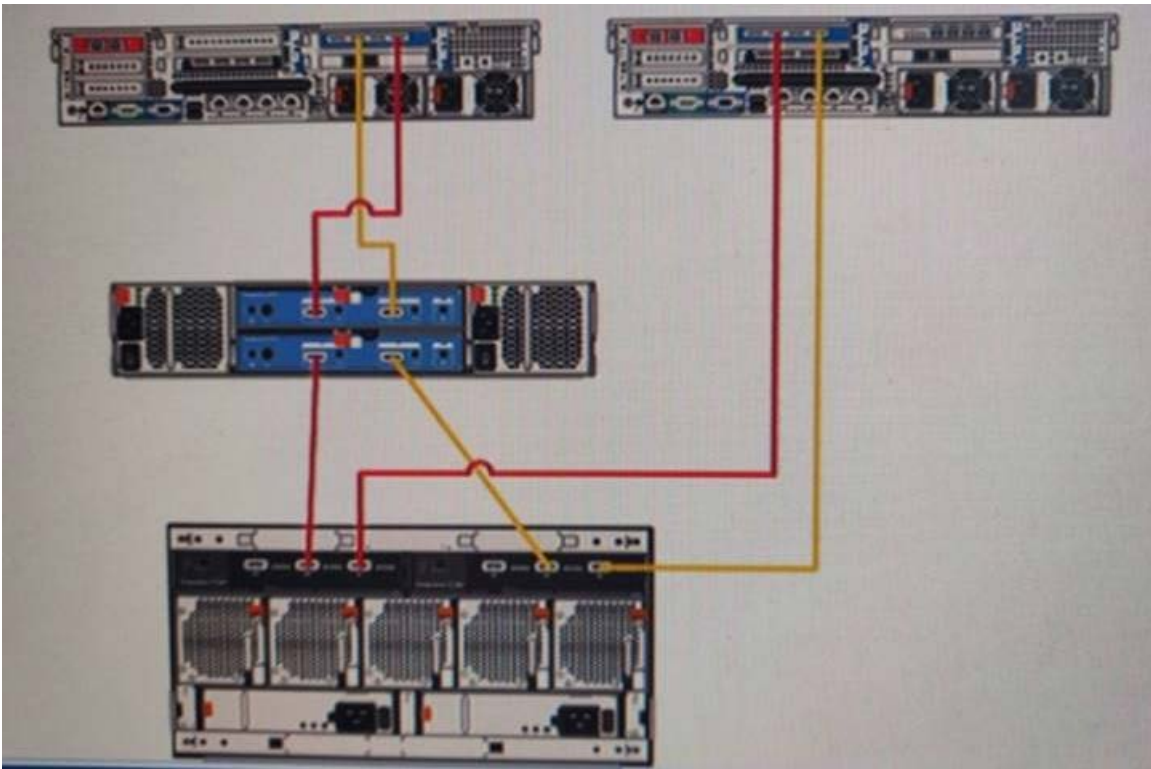

B)

C)

D)

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: A**

### Question: 16

You are adding a 4-port FC card into the SC9000 storage array. Slots 4 C 6 are occupied and Slot 4 contains a half-height card.

Which actions should occur to free up the full height slot and add the FC card?

A)

Run the I/O Hardware Change wizard to move the existing card before adding the new FC card  
Move the HBA from the full height slot to receive new WWNs

B)

Run the I/O Hardware Change wizard to add the FC card at the same time as moving the half-height card  
Move the HBA from the full height slot to receive new WWNs

C)

Install a half-height I/O bracket on the card from Slot 4  
Run the I/O Hardware Change wizard to move the existing card before adding the new FC card

D)

Install a half-height I/O bracket on the card from Slot 4  
Run the I/O Hardware Change wizard to add the FC card at the same time as moving the half-height card

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: C**

### Question: 17

A company has multiple Storage Centers at their primary site and a disaster recovery system at their remote site. Because the company has an important volume that requires high availability protection, an outage on one system at the primary location must not cause data to be inaccessible. In addition, disaster recovery protection is required to protect data even if the primary site goes down.

Which recommended technology meets these requirements?

- A. Live Volume Managed Replication
- B. Fluid Data Architecture
- C. Synchronous Replication
- D. Asynchronous Replication

**Answer: A**

### Question: 18

During the deployment of an SC Series storage array, the redundancy of a tier may be restricted to dual redundancy.

What is the cause for this behavior?

- A. Depending on the drive firmware level and drive size, Dell Storage Manager will enforce dual redundancy
- B. Depending on the drive speed, drive size, and SCOS version, dual redundancy may be enforced
- C. Depending on the drive manufacturer and SCOS version, Dell Storage Manager will enforce dual redundancy
- D. Depending on the number of spares configured on the system and SCOS version, dual redundancy may be enforced

**Answer: A**

### Question: 19

You need to physically install an I/O card into an SC9000 storage array.

What must be considered when installing the I/O card?

- A. I/O card BIOS and IPC connection
- B. ESD and I/O slot priority
- C. I/O slot priority and I/O card BIOS
- D. IPC connection and ESD

**Answer: A**

### **Question: 20**

A storage administration needs to enable regular Data Progression to move data between storage tiers. While navigating through the Volume Create wizard, which storage profile should be selected?

- A. Low Priority
- B. Medium Priority
- C. High Priority
- D. Recommended

**Answer: C**

### **Question: 21**

You map a volume to a Microsoft Windows 2012 R2 server and scan for disks within the Windows Disk Management Console. You are able to see multiple Instances of the mapped volume. In addition, the operating system was recently installed on the server that is experiencing the issue. No additional features have been added.

Which action should occur within Windows to correct the issue?

- A. Add the Storage Center specific hardware ID within Windows MPIO  
Select the disk object with the lowest number and delete the rest  
Verify the iSCSI Initiator service runs on the server
- B. Add the Storage Center specific hardware ID within Windows MPIO  
Add the "Multipath I/O" server feature  
Reboot the server after making the correct configuration changes
- C. Select the disk object with the lowest disk number and delete the rest  
Add the "Multipath I/O" server feature  
Reboot the server after making the correct configuration changes  
Verify the iSCSI Initiator service runs on the server

**Answer: B**

### **Question: 22**

You notice that servers connecting through iSCSI are not performing as expected. After reviewing the graphics, you identify high latency due to an excessive number of retransmissions.

What is causing the performance issue?

- A. System uses the standard MTU size
- B. Switch firmware is out of date
- C. VLAN ID value is set on the properties of the server NIC
- D. Flow Control is disabled

**Answer: C**

### Question: 23

A deployment engineer is installing a dual-controller Storage Center with four FC ports in each controller. This system need to use Legacy Port mode because the AIX version used requires it.

Which two configurations are required to set up the fault domains?

- A. Only two fault domains; one for the primary ports and one for the reserved ports  
Primary and reserved ports in the fault domain need to reside on the same controller
- B. Only two fault domains; one zone for all ports in each fabric  
Primary and reserved ports in the fault domain need to reside on the different controllers
- C. A separate fault domain for each set of primary and reserved ports  
Primary and reserved ports in the fault domain need to reside on different controllers
- D. A separate fault domain for each set of primary and reserved ports  
Primary and reserved ports in the fault domain need to reside on the same controller

**Answer: C**

### Question: 24

You want to perform an SCOS ISO update.

However, you need to determine the BMC IP address first.

What is one way to determine the BMC IP address?

- A. Select the "Hardware" tab from the Data Collector to display the BMC IP address for each controller
- B. Select the "Storage Centers" tab from the Data Collector to display the BMC IP address for each controller
- C. In the Dell Storage Manager Client, highlight the controller under the "Hardware" tab and select Edit Settings
- D. Perform a trace route from the controller CLI to the virtual IP address

**Answer: B**

### Question: 25

A company experienced complete storage outages on some of their servers. The outages occurred when network maintenance was performed within their iSCSI network.

Which configuration areas should be investigated to prevent future outage?

- A. Ensure Delayed Acknowledgment has been disabled on the iSCSI adapters.  
Ensure all server iSCSI adapter are able to communicate with the storage.
- B. Ensure the servers are set up for multipathing with Round Robin.  
Ensure Delayed Acknowledgment has been disabled on the iSCSI dapters.
- C. Ensure the iSCSI adapters are set up for Jumbo Frames.  
Ensure all server iSCSI adapters are able to communicate with the storage.
- D. Ensure the servers are set up for multipagthing with Round Robin  
Ensure all server iSCSI adapters are able to communicate with the storage.

**Answer: C**

# SAMPLE QUESTIONS

*These questions are for demo purpose only. **Full version** is up to date and contains actual questions and answers.*

*Killexams.com is an online platform that offers a wide range of services related to certification exam preparation. The platform provides actual questions, exam dumps, and practice tests to help individuals prepare for various certification exams with confidence. Here are some key features and services offered by Killexams.com:*

**Actual Exam Questions:** *Killexams.com provides actual exam questions that are experienced in test centers. These questions are updated regularly to ensure they are up-to-date and relevant to the latest exam syllabus. By studying these actual questions, candidates can familiarize themselves with the content and format of the real exam.*

**Exam Dumps:** *Killexams.com offers exam dumps in PDF format. These dumps contain a comprehensive collection of questions and answers that cover the exam topics. By using these dumps, candidates can enhance their knowledge and improve their chances of success in the certification exam.*

**Practice Tests:** *Killexams.com provides practice tests through their desktop VCE exam simulator and online test engine. These practice tests simulate the real exam environment and help candidates assess their readiness for the actual exam. The practice tests cover a wide range of questions and enable candidates to identify their strengths and weaknesses.*

**Guaranteed Success:** *Killexams.com offers a success guarantee with their exam dumps. They claim that by using their materials, candidates will pass their exams on the first attempt or they will refund the purchase price. This guarantee provides assurance and confidence to individuals preparing for certification exams.*

**Updated Content:** *Killexams.com regularly updates its question bank and exam dumps to ensure that they are current and reflect the latest changes in the exam syllabus. This helps candidates stay up-to-date with the exam content and increases their chances of success.*

**Technical Support:** *Killexams.com provides free 24x7 technical support to assist candidates with any queries or issues they may encounter while using their services. Their certified experts are available to provide guidance and help candidates throughout their exam preparation journey.*
